

Creating the Navigation Icons

Creating the Title, About, Symptoms, Treatment, and Help Buttons

Next, I need to create the navigations icons for each section of the website. I plan to have a title page, a “what is alopecia areata” page, a symptoms & treatment page, and a “how to help” page. Clicking these buttons will redirect the user to that portion on the website.

```
<nav class="navbar navbar-expand-lg navbar-light fixed-top py-3" id="mainNav">
  <div class="container px-4 px-lg-5">
    <a class="navbar-brand" href="#page-top">Alopecia Areata</a>
    <button class="navbar-toggler navbar-toggler-right" type="button" data-bs-toggle="collapse" data-bs-
target="#navbarResponsive" aria-controls="navbarResponsive" aria-expanded="false" aria-label="Toggle
navigation"><span class="navbar-toggler-icon"></span></button>
    <div class="collapse navbar-collapse" id="navbarResponsive">
      <ul class="navbar-nav ms-auto my-2 my-lg-0">
        <li class="nav-item"><a class="nav-link" href="#about">About</a></li>
        <li class="nav-item"><a class="nav-link" href="#symptoms">Symptoms and Causes</a></li>
        <li class="nav-item"><a class="nav-link" href="#portfolio">Treatment</a></li>
        <li class="nav-item"><a class="nav-link" href="#contact">How to Help</a></li>
      </ul>
    </div>
  </div>
</nav>
```

Each button links to its corresponding title, for example, clicking the about button will redirect the user to the About page, thus, the “href” is called “about”.

Output:
